

Dream Team: Safeskiiii Conceptual Sketch

Key Purposes

The overall purpose of our app is to provide a good experience for the community of Alta, Utah. Alta is an interesting town, because although it has a population of just ~1000, over 500k visitors come every year to ski, many of them first-time visitors. We want to provide a good & simple experience to all of them, especially in these times, where COVID is a concern to pretty much everyone. As such, we plan on providing important information on different businesses in the city, particularly related to COVID.

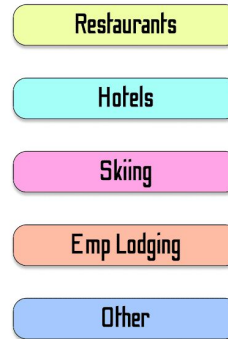

Key concepts

We have a few different concepts that are not simple CRUD. We have a map with locations, which will be non-trivial to design in a way that fits our demographic and city layout specifically. Also, for restaurants, we plan to have rating and forum/review components, as well as other similar components in different “areas”.

Why it's interesting

We think what makes this most interesting may be the way we represent and store all this information together. Some info should be user-centric, but others should be more bound to the restaurant or location. Also, one thing we are considering is a way to have both users and owners (or employees, or whatever) have a similar interface but different functionalities, which would make our app more holistic, and will be a challenge (and interesting) to design effectively.
